

Baffour Kusi Frimpong

Full-Stack Engineer | Python (FastAPI) & Flutter | API + Mobile

Heilbronn, Germany | kinstugi.webdev@gmail.com | +49 1523 8704907 | <https://github.com/toxicOxygen> | <https://linkedin.com/in/bkusi-fri/>

Profile

Full-stack engineer with 6+ years building production Python systems and hands-on Flutter experience on the mobile side. Most recently designing FastAPI services, RAG pipelines, and AI-integrated tooling on AWS; earlier owned Python REST APIs end-to-end across PostgreSQL and Redis data layers. Comfortable owning the full product — API design, data modelling, deployment, and the mobile client that consumes it — and have built personal end-to-end projects pairing a Django backend with a Flutter frontend. C/C++ systems background grounds my work in performance, memory, and low-level debugging, which translates directly into writing efficient Python and clean Dart.

Skills

Languages & Frameworks: Python, FastAPI, Django / DRF, Pydantic / pydantic-ai, C/C++

Mobile: Flutter, Dart, React Native, Provider (state management)

AI & Data: RAG pipelines, LLM APIs / Generative AI, Kafka, ETL pipelines, Vector databases (pinecone)

Infrastructure: AWS, Docker, CI/CD (GitHub Actions)

Databases: PostgreSQL, MongoDB, Redis

Work Experience

Senior Software Engineer | TradeComply, Heilbronn, DE

Jun 2025 – Present

- Designed and built high-performance backend services in Python / FastAPI, delivering scalable REST APIs and data pipelines aligned to complex technical product requirements.
- Engineered a Retrieval-Augmented Generation (RAG) pipeline using pydantic-ai and vector databases to extract and synthesise insights from large technical document corpora.
- Integrated Kafka event streaming for decoupled, fault-tolerant data ingestion across distributed pipeline stages, improving system resilience and throughput.
- Built and maintained ETL workflows and generative AI tooling deployed on AWS, owning the full lifecycle from architecture design through production monitoring.
- Established CI/CD pipelines (GitHub Actions) with automated test gates, enforcing code quality and enabling fast, reliable releases in an Agile team.
- Contributed actively to product strategy discussions, translating business requirements into scalable technical decisions with clear trade-off reasoning.

Software Engineer | INOP BV, Amsterdam, NL

Feb 2024 – Aug 2025

- Built Python REST APIs backed by PostgreSQL and Redis vector stores, optimising query performance and data retrieval for high-dimensional embedding workloads.
- Developed mobile frontend features in React Native and Flutter, owning end-to-end vertical slices from API contract through UI delivery.
- Deployed and maintained Docker-containerised services with automated CI/CD release pipelines for enterprise clients.

- Designed and executed automated integration test suites, ensuring production stability and reducing manual verification overhead across sprint cycles.
- Collaborated closely with product managers and design in a fast-paced international startup environment, contributing to feature scoping and technical roadmap decisions.

Full Stack Engineer | Codecks, Istanbul, TR

Feb 2021 – Jan 2024

- Designed and scaled Python backend services and RESTful APIs with clean architecture patterns and strict data serialisation via Pydantic.
- Owned the complete development lifecycle — database modelling (PostgreSQL), API design, testing, deployment, and production diagnostics — across multiple product lines.
- Acted as technical lead on several product features, working directly with product and design to prioritise, scope, and ship robust solutions on schedule.
- Refactored and optimised existing codebases, improving maintainability and reducing server-client latency through targeted performance analysis.

Embedded Systems Engineer | Yongatek, Istanbul, TR

May 2019 – Feb 2021

- Developed Python / OpenCV image processing pipeline for a handheld 3D scanner — depth filtering, point cloud extraction, and REST API integration.
- Background in C/C++ firmware and systems programming; provides strong foundation for performance-critical Python and low-level debugging.

Education

Degree in Systems Programming and C | 42 Heilbronn

Jan 2026 – Present

Master in Software Engineering | Kocaeli University

Jan 2023 – Dec 2025

Bachelor in Mechatronics Engineering | Kocaeli University

Jan 2016 – Dec 2020

Languages

English (Native/Fluent), Turkish (Professional), German (Basic), Dutch (Beginner)

Projects

Twitter Clone — Backend API (Django/DRF) | Django 3.0, Django REST Framework, django-allauth, SQLite, Pillow, gunicorn | https://github.com/toxicOxygen/twitter_api_clone

Personal full-stack learning project (2020-21): Django REST API imitating Twitter's core flows — token auth, posts with image upload, comments, likes, follows, and user profile retrieval. Built as the backend for a paired Flutter mobile client.

Twitter Clone — Mobile Client (Flutter) | Flutter SDK 2.7 (Dart 2, pre-null-safety), Provider, http, shared_preferences, carousel_slider | https://github.com/toxicOxygen/flutter_twitter_clone

Personal full-stack learning project (2020-21): Flutter mobile client that consumes the paired Django backend. Multi-screen UI covering feed, post detail, user profile, and follow/like flows.
